

Tabulation Capabilities

Our in-house data processing and tabulation capabilities utilize CfMC's Mentor software tabulation system, which is fully integrated with our Survent CATI software. This system provides us with the ability to:

- Create standard cross-tabulations, which can be printed or saved to a spreadsheet or word-processing file to produce report-ready tables.
- Print descriptive statistics such as mean, median, standard deviation and standard error.
- Perform significance testing at two different confidence levels (e.g., 90% and 95%).
- Print up to 20 points per banner.
- Produce mean summary tables.
- Perform data manipulation and data weighting for such tasks as recoding of the data, adding or subtracting columns, etc.
- Output the data in a variety of formats including ASCII delimited or SPSS.

CfMC's integration of Survent and Mentor allows us to go directly from final interview to complete tabulations (with statistical testing) within a matter of minutes.
